## 3 Digitization & HIPAA Challenges for Protected Health Information (PHI)

1 Patient Data Usability & Accessibility

High-Speed, Safe & Accurate Digitization

Accurate, automated AI/ML data ingestion for Electronic Health Record (EHR) systems, analytics, and other systems using the industry's leading Intelligent Document Processing (IDP) technology.

2 Patient Data Accuracy & Privacy

Semi-Automated Correction of Misfiled Record HIPAA Violations

AI/ML automated logic and IDP combine to find and flag HIPAA violation patient record misfiles in digitized files for human-supervised correction.

3 Patient Data for Research & Requests

PHI/PII Redaction & Anonymization for Analytics, Research & Requests

AI/ML automated data extraction and redaction capabilities for bulk records. IDP technology preserves the original while creating a new redacted version for research and requests.
